SUMMARY

Software Development Engineer with 2+ years of experience across 5+ client products, building cross-platform apps with Flutter for Android and iOS and native Android apps with Kotlin and Jetpack Compose. Experience ranges from fintech security hardening to offline-first architecture for low-connectivity regions, real-time data dashboards, and native SDK integrations. Owns delivery end to end, from technical design through release, store rollout, and post-release stability. Strong on the production side of mobile through crash triage, release automation, and app security, with a solid base in CS fundamentals, DSA, and system design (LLD/HLD).

EXPERIENCE

Software Development Engineer | Rootquotient, Chennai Jun 2024 - Present

- Remediated VAPT findings for a fintech app, closing every finding including critical severity issues through SSL pinning, root and jailbreak detection, encrypted local storage, etc., and clearing the re-audit with no open findings.
- Implemented cryptographic biometric authentication with hardware-backed key pairs and built a passkey (WebAuthn/FIDO2) reference implementation in Flutter for Android and iOS, replacing local biometric flags and passwords with signature-based sign-in.
- Transitioned from Flutter to native Android (Kotlin), delivering features end to end across audio recording, draft and publish flows, feed, discovery, and commenting.
- Implemented role-based access handling, applying backend-defined permissions to control feature availability and restrict actions by user role.
- Tracked platform and tooling changes and adopted them ahead of enforcement deadlines, including the CocoaPods to Swift Package Manager migration and 16 KB page size support.
- Brought in on a short-term allocation to stabilize a product's initial releases, lifting the crash-free rate from 70% to 98% by diagnosing and fixing 10+ crashes and ANRs.
- Eliminated frame drops and UI freezes on data-heavy screens by fixing repaint boundaries and redundant recalculations on Flutter chart displays, and moving blocking Realm draft writes off the main thread in native Android, profiled with Flutter DevTools and Android Profiler.
- Integrated Razorpay payments and bridged the Trustly SDK natively via Method Channels. Streamed native geofencing updates over Event Channels on Android and iOS across foreground, background, and terminated states, adopted as the production reference.
- Integrated Salesforce Messaging for In-App into a mobile product, configuring pre-chat flows and in-app messaging.
- Built a Melos-based Flutter monorepo template (clean architecture, BLoC) where each feature is a standalone package with one-way dependencies on shared packages and centralized API error handling, so features could be built and tested in isolation.
- Built offline-first apps for field users in remote areas, caching API responses via Hive and a custom Dio interceptor to render cached screens instantly, syncing background data with constraint-based WorkManager, and cutting cold start times by 20% through R8 code and resource shrinking.
- Built the Flutter consumer app for a smart grid energy platform, streaming live meter data from up to 10 appliances per household over WebSockets, and integrated the Seam API for in-app thermostat control.
- Cut CI/CD pipeline time from 45-50 minutes to 25 minutes by parallelizing Android and iOS builds and caching Gradle and Flutter dependencies keyed on lockfile changes. Built reusable Azure DevOps pipeline templates used across 5+ projects for automated store releases, with working exposure to Fastlane.
- Maintained 90% unit and integration test coverage to ensure codebase stability, while expanding app delivery to Flutter Web with responsive design and UX parity with mobile.
- Actively involved in peer code reviews and knowledge sharing, and authored handover documentation covering codebase structure, setup, and third-party integrations.

Software Development Engineer Intern | Rootquotient, Chennai Jun 2022 - Jan 2023 & Dec 2023 - May 2024 (during M.Sc.)

- Contributed to 2+ production Flutter apps, building UI components, integrating REST APIs, and implementing GoRouter navigation.
- Worked with Redux and BLoC state management and gathered requirements directly from clients in agile sprints.

SKILLS

Mobile Development: Flutter, Dart, Kotlin, Swift, BLoC, Redux, GoRouter, Dio, Hive, Melos, Method Channels, Pigeon, Flutter Web, Jetpack Compose, Navigation 3, Coroutines, Flow, Hilt (Dagger), Room, Realm, WorkManager, Media3/ExoPlayer, React Native

Web & Backend: React, TypeScript, Node.js, Express.js, REST APIs, MongoDB, Supabase

Tools & Practices: Git, CI/CD, Azure DevOps, Fastlane, MVVM, Unit & Integration Testing, Mockito, JUnit, Turbine, Compose UI Testing, Firebase Crashlytics & Analytics, FCM, VAPT Remediation, AI-Integrated Development Workflows

PROJECTS

FitSync - Native Android workout management app GitHub

- Built an offline-first Kotlin/Compose workout app with encrypted token storage, AlarmManager reminders with snooze, and geofence-based automatic gym check-in that logs visits to Room and stays active after reboots.
- Built the Node.js/TypeScript backend with JWT auth, session interceptors, and sliding-window API rate limiting.

Built With: Kotlin, Jetpack Compose, MVVM, Hilt, Room, WorkManager, Play Services Location, Retrofit/OkHttp, Node.js, Express.js, TypeScript, JWT

On-Device LLM Benchmark - Local models vs cloud-hosted inference GitHub

- Built a Flutter app with native inference engines, Kotlin on Android and a Swift actor-based MediaPipe backend on iOS, plus LiteRT-LM as a second engine behind a UI toggle.
- Implemented a structured benchmark harness with quality scoring on keyword match, repetition rate, and length compliance.

Built With: Flutter, Dart, Kotlin, Swift, MediaPipe, LiteRT-LM, Method Channels

EDUCATION & CERTIFICATIONS

Coimbatore Institute of Technology | Integrated M.Sc. in Artificial Intelligence and Machine Learning | CGPA: 8.44 2019 - 2024

Anthropic: Claude Code in Action (Jun 2026), Introduction to Model Context Protocol (Jun 2026), Introduction to Agent Skills (May 2026)
